TRIMUI ModelS Emulators are all base on original emulators not RetroArch.

Please check attached SD patch for the demo collection. Extract the patch and copy to your SD in FAT32 format.

Find folders:

Apps --- applications

Emus --- emu app with RA cores

Imgs --- snapshots in png/jpg

Roms --- game roms

Please copy roms from other machine like S905 TVBOX EmuElec or other game console.

Roms should put in the correct folders, please check config.json in Emus, this file specifies the rom path/preview image path

For example Emu/ARCADE/config.json:

```
{
    "label":"ARCADE",
    "icon":"ic-ARCADE.png",
    "iconsel":"",
    "launch":"launch.sh",
    "rompath":"../../Roms/ARCADE",
    "imgpath":"../../Imgs/ARCADE",
    "useswap":1,
    "shortname":1,
    "hidebios":1,
    "extlist":"zip"
}
```

For console platform, the rom format is almost zip files.

For arcade platform, notice the romset version

Built in EMU arcade romset version requires:

ARCADE	fba 0.2.96.86
FC	
GB	GB/GBC using gPSP
GBA	
MD	
MS	
NEOGEO	gngeo romset
NGP	
PCE	
PS	
SFC	

This patch is verified on TRIMUI ModelS fw ver 0.106.
